Greetings,

As you can see from the agenda for the upcoming AJCU conference, I will be working with the BOF session on faculty rewards for instructional software development.

I am asking if you all would bring with you (or e-mail) information on what rewards and incentives (regardless how slight) your institution has for encouraging faculty to develop instructional software. Does your institution have a dedicated support unit to help faculty develop such software.

I will collate and summarize your responses to be distributed and used for discussion at the BOF session.

I have another request.

Could you all send or bring, copies of any official policies from your institution regarding ethics in the use and access of information technological resources, facilities and services? These could include telephone services, LAN, use of software and etc. Again, I would like to collate and summarize for distribution and discussion. I am also working on a project with EDUCOM on maintaining a database on Ethics Statements in Information Technology.

Thanks and have a good day. Will see you all next week.

Jack

Rockhurst gives no special incentive to develop software. However, because we are a teaching college more than a research university, rank & tenure looks on such activities with almost as much favor as they would traditional scholarly activities. There is no unit dedicated to helping faculty with such activity.

I will try to remember to bring a copy of our policy.

I look forward to seeing everyone.
